

Nyx Security chooses for Bosch

BOSCH
Invented for life

Swedish security company Nyx is an industry leader in providing real-time remote monitoring services. Its customers operate in a broad range of sectors including retail, banking, petrol stations, construction and real estate. Vulnerable sites such as government offices and buildings are also one of its specialties. The company's monitoring network utilizes the most advanced IP-based technology with intelligent video analysis (IVA) operating in real time. The company also plays a leading role in promoting the latest standards, developing new technologies and launching new innovative products and services.

Major installation

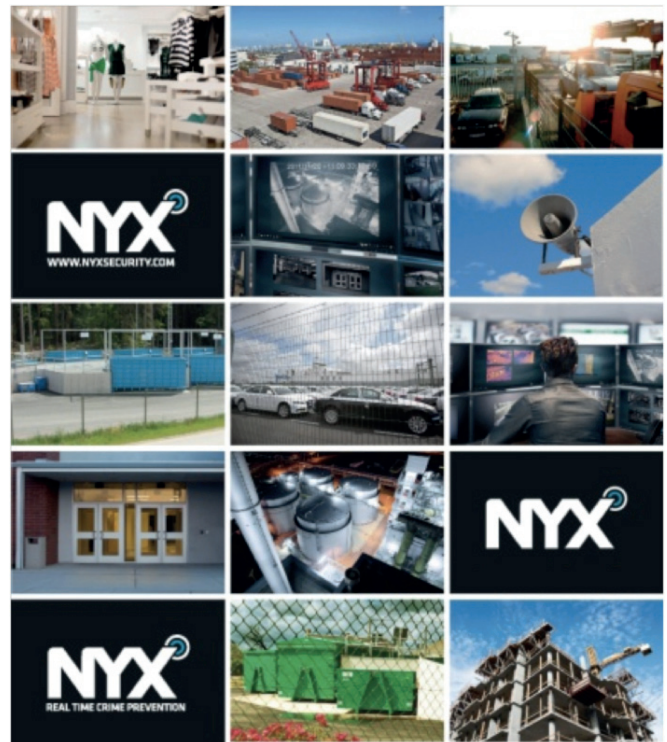

Nyx's monitoring center in Stockholm conducts remote monitoring services via 8 central servers with approximately 5000 channels. A mix of Bosch pure IP cameras and analog cameras with IP encoders is deployed, 80% of which are supported by IVA. In addition, 100 thermal cameras and approximately 300 Bosch DiBos and BRS units are installed.

A real innovative solution

"The key reasons for choosing Bosch for our remote monitoring system were the Bosch Video Management System (BVMS), which is used in the front end, and the Bosch cameras embodying IVA – a technology virtually pioneered by Bosch," says Nyx CEO, Andreas Johansson Österberg. We have developed a proprietary camera monitoring system that prevents, stops and documents criminal and other undesirable activities. Our high-tech system comes with built-in intelligent camera monitoring in real time. Customers' cameras are connected to Nyx Security's manned camera monitoring center where recordings are stored round the clock, all year round.
